CVWO Writeup (Final Assignment Submission)

1   thing.do User Guide

Features:

- CRUD operations
- Tagging system
  - Multiple different tag colors to aid visual identification of different tags
  - Tag colors are automatically generated
  - Auto filter by tag(s)
- Cloud sync using email account
- Add to Google Calendar
- Smooth animations

User guide:

The app is designed to be as intuitive as possible and should not require much instructions. The app also provides helpful, contextualized hints and tooltips to aid the user. The top-right region would show the user that is currently logged in, and clicking it would open a modal box that will allow them to sign in. **It should be noted, however, that signing in will reset all your currently (offline) stored tasks.**

2   Accomplishments

I did not have much time to work on this project; the commit history would show that I only started a little during the start of the winter break, and rushed everything else nearer to the submission date. But thankfully, over the winter break, I was able to learn a lot of different things, and while it is unfortunate that I was not able to finish all the features I had originally wanted (especially social login and workspaces), I am quite proud of what I have been able to achieve over the few days.

I am glad I was able to upgrade to Tailwind 3 as well, although it did cause a slight disruption to plans

The frontend will ideally be hosted on Netlify, and the backend on Heroku.
